

California Domestic Water Company

2016 DRINKING WATER CONSUMER CONFIDENCE REPORT

15505 Whittier Blvd. • P.O. Box 1338 • Whittier, CA 90609-1388 • Tel 562-947-3811 • Fax 562-947-8843

CALIFORNIA DOMESTIC WATER COMPANY

Once again, Californian Domestic Water Company (Water Company) is proud to provide you with this Consumer Confidence Report. Results of the tests conducted in 2015 show that your drinking water meets or is better than all state and federal health related standards. In addition, this report provides detailed results of water quality testing, water sources, and basic information about drinking water contaminants.

Our Own Local Water Source: The Main San Gabriel Basin

Water delivered to customers is from the Water Company's Bassett Wellfield, located on the west bank of the San Gabriel River, at the intersection of the 605 and I-10 Freeways. Water is pumped from five groundwater wells, Wells 2, 3, 5A, 6, and 8.

We Use Advanced Water Treatment Techniques

The Water Company maintains a variety of standard and advanced water treatment facilities that are used on particular wells as needed: air-stripping, ion-exchange, ultra-violet light, pH control and chlorination.

Extensive Testing to Ensure Water Quality

We monitor and test for water quality on a weekly basis for coliform bacteria, NDMA, perchlorate, nitrate, and VOCs throughout the production and distribution systems. Other monitoring is conducted bi-weekly, monthly, quarterly, bi-annually, and annually. We collect over 2,000 samples in total each year.

Special Advice for Immuno-Compromised Persons

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Information About Drinking Water Quality

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

More Information About Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Information About Nitrate

Nitrate in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

Source Water Assessment Completed

An assessment of the drinking water sources for California Domestic Water company was completed in October 2010. The source is considered most vulnerable to the following activities associated with contaminants detected in the water supply:

- Drinking water treatment plants
- Known contaminant plumes
- Underground storage tanks – Confirmed leaking tanks
- Housing – high density
- Wells – Water Supply
- Schools

The source is considered most vulnerable to the following activities not associated with any detected contaminants:

- Transportation corridors – Freeways/state highways
- Transportation corridors – Railroads

A copy of the complete assessment may be viewed at:
California Domestic Water Company
15505 Whittier Blvd.
Whittier, CA 90603

You may request a summary of the assessment be sent to you by contacting:
Ernesto Che Venegas
Operations Manager
(562) 947-3811

Results of 2015 Drinking Water Quality Tests

The tables below list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. California Domestic Water Company regularly tests for hundreds of substances. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one-year-old.

Parameter	Units	MCL	PHG or (MCLG)	Bassett Wellfield (Raw Groundwater)		Distribution (Treated Water)		Most Recent Sampling Date	Major Sources In Drinking Water
				Range	Average	Range	Average		
REGULATED CONTAMINANTS WITH PRIMARY MCLs, MRDLs, TTS, OR ALs									
TABLE 1 – MICROBIOLOGICAL CONTAMINANTS									
Total Coliform Bacteria (Total Coliform Rule)	% Samples positive	See Note 1	(0)	No Violations	0	No Violations	0	2015	Naturally present in the environment.
Fecal coliform and E. coli (Total Coliform Rule)	Samples positive	See Note 2	(0)	No Violations	0	No Violations	0	2015	Naturally present in the environment.
TABLE 2 – INORGANIC CONTAMINANTS									
Arsenic	ppb	10	0.004	ND-2.7	2.1	2.1-2.4	2.3	2015	Erosion of natural deposits; runoff from orchards; glass and electronics production wastes.
Barium	ppm	1	2	0.10-0.14	0.12	0.12	0.12	2015	Discharges of oil drilling wastes and from metal refineries; erosion of natural deposits.
Chromium	ppb	50	(100)	ND	ND	ND	ND	2015	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits.
Copper	ppm	1 AL=1.3	0.3	ND	ND	ND	ND	2015	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.
Fluoride (temperature dependent)	ppm	2	1	0.29-0.31	0.30	0.30-0.32	0.31	2015	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.
Hexavalent Chromium	ppb	10	0.02	1.4-2.6	2.1	N/S	N/S	2014	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.
Lead	ppb	1000 AL=15	0.2	ND	ND	ND	ND	2015	Internal corrosion of household plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.
Nitrate (as N) TT	ppm	10 as N	10 as N	2.1-7	4.2	2.4-4.9	3.9	2015	Runoff and leaching from fertilizer use, leaching from septic tanks and sewage; erosion from natural deposits.
Perchlorate TT	ppb	6	N/A	ND-11	2.7	ND-3.8	1.7	2015	Perchlorate is an inorganic chemical used in solid rocket propellant, fireworks, explosives, flares, matches, and a variety of industries. It usually gets into drinking water as a result of environmental contamination from historic aerospace or other industrial operations that used or use, store, dispose of perchlorate and its salts.

NOTE 1: MCL: Systems that collect > 40 samples/month, no more than 5.0% of samples are positive.

NOTE 2: MCL: a routine sample and a repeat are total coliform positive, and one of these is also fecal coliform or E. coli positive.

Parameter	Units	MCL	PHG or (MCLG)	Bassett Wellfield (Raw Groundwater)		Distribution (Treated Water)		Most Recent Sampling Date	Major Sources In Drinking Water
				Range	Average	Range	Average		
REGULATED CONTAMINANTS WITH PRIMARY MCLs, MRDLs, TTS, OR ALs									
TABLE 3 – RADIOACTIVE CONTAMINANTS									
Gross Alpha particle activity	pCi/L	15	(0)	ND-7.5	2.2	N/A	N/A	2005-2015	Erosion of natural deposits.
Combined Radium 226+228	pCi/L	20	(0)	ND	ND	N/A	N/A	2005-2015	Erosion of natural deposits.
Uranium	pCi/L	20	0.43	2-5	2.6	N/A	N/A	2004-2015	Erosion of natural deposits.
TABLE 4 – SYNTHETIC ORGANIC CONTAMINANTS INCLUDING PESTICIDES AND HERBICIDES									
Di(2-ethylhexyl) phthalate (DHEP)	ppb	4	12	ND	ND	N/A	N/A	2015	Discharge from rubber and chemical factories; inert ingredient in pesticides.
Thiobencarb	ppb	70	70	ND	ND	N/A	N/A	2012	Runoff/leaching from herbicide used on rice.
TABLE 5 – VOLATILE ORGANIC CHEMICALS									
Carbon Tetrachloride TT	ppt	500	100	ND-2100	500	ND	ND	2015	Discharge from chemical plants and other industrial activities.
1,1-Dichloroethylene TT	ppb	6	10	ND-6.2	1.8	ND	ND	2015	Discharge from industrial chemical factories.
cis-1,2-Dichloroethylene TT	ppb	6	100	ND-4.5	1.2	ND	ND	2015	Discharge from industrial chemical factories; major biodegradation byproduct of TCE and PCE groundwater contamination.
Tetrachloroethylene (PCE) TT	ppb	5	0.06	ND-39	10.1	ND-1	0.5	2015	Discharge from factories, dry cleaners, and auto shops (metal degreaser).
Trichloroethylene (TCE) TT	ppb	5	0.8	ND-43	11.8	ND-1.9	0.9	2015	Discharge from metal degreasing sites and other factories.
TABLE 6 – DISINFECTION BYPRODUCTS, DISINFECTANT RESIDUALS, AND DISINFECTION BYPRODUCT PRECURSORS - Three locations are tested quarterly for disinfection byproducts.									
TTHMs (Total Trihalomethanes) 2015	ppb	80	N/A	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Average	Byproduct of drinking water disinfection.
Site 1				3.60	0.65	4.80	14.00	5.76	
Site 2				2.30	0.57	1.10	1.20	1.29	
Site 3				0.00	0.00	0.00	0.00	0.00	
HAA5 (Haloacetic Acids) 2015	ppb	60	N/A	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Average	Byproduct of drinking water disinfection.

Color	Units	15	N/A	ND	ND	ND	ND	2015	Naturally-occurring organic materials.
Odor Threshold	TON	3	N/A	1	1	1	1	2015	Naturally-occurring organic materials.
Turbidity	NTU	5	N/A	ND-0.3	0.03	ND	ND	2015	Soil runoff.
Total Dissolved Solids	ppm	1000	N/A	250-370	307	290-310	300	2015	Runoff/leaching from natural deposits.
Specific Conductance	umhos/cm	1600 µS/cm	N/A	420-600	5501	480	480	2015	Substances that form ions in water; seawater influence.
Chloride	ppm	500	N/A	11-30	19.8	16-18	17	2015	Runoff/leaching from natural deposits; seawater influence.
Sulfate	ppm	500	N/A	27-59	41.6	43-45	44	2015	Runoff/leaching from natural deposits; industrial wastes.

TABLE 8 – STATE REGULATED CONTAMINANTS WITH NO MCLs

Vanadium	ppb	NL=50	N/A	190-250	217	210-220	215	2015	Runoff and leaching from natural deposits.
----------	-----	-------	-----	---------	-----	---------	-----	------	--

TABLE 9 – ADDITIONAL RESULTS

Hardness	ppm	N/A	N/A	190-250	217	210-220	215	2015	Runoff and leaching from natural deposits.
Sodium	ppm	N/A	N/A	11-27	18.4	15-16	15.5	2015	Runoff and leaching from natural deposits, seawater influence.
pH	Std. Units	N/A	N/A	7.7-7.9	7.8	7.7-7.8	7.7	2015	Measure of alkalinity and acidity.
N-nitrosodimethylamine (NDMA) TT	ppt	AL 10	N/A	ND-20	3.4	ND	ND	2015	Production of rocket fuel, rubber products, solvents, and a lubricant additive.

Definitions and Abbreviations Used In the Chart

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

NL: notification level

N/A: not applicable

N/S: not sampled
